FIRST QUARTER FY21

WHAT'S NEW AT MCLB
ALBANY?

VIRTUAL REALITY FORKLIFT SIMULATOR

COMING SOON!!!

MCLB Albany recently ordered a forklift simulator for the purpose of enhancing the command's material handling equipment operators training program. It is the easiest, safest, and most effective way to screen, train, and protect our forklift operators. The simulator's virtual reality technology immerses users in both realistic and challenging scenarios.

The forklift simulator program provides ten levels of training scenarios with forty-three different exercises. Training scenarios vary in operational objectives, environments, and safety situations. The objectives are clear and simulated in environments with varying surfaces and conditions. The training curriculum is progressive and enhances the operator's efficiency, while developing their confidence.

This modern technology is the optimal training tool for both new and experienced operators. It eliminates costs and damages associated with forklift training mishaps. Inexperienced operators can learn from their mistakes in simulation; while experienced operators can focus on reviewing best practices. The simulator continuously informs the operator on their progress by providing direct and complete feedback throughout the training sessions.

The forklift simulator has a Learning Management System that records and manages simulation training. This system allows each user to login with their own personal pin or code. Trainees can see their assigned exercises and the results of previous sessions. Instructors can review the progress and results of trainees. This allows for the customization of individual training programs based on the needs of the respective trainee. The simulator uses genuine original equipment manufacturer forklift parts. The simulator drives and operates just like a real forklift. This state-of-the-art technology provides operators with an experience that is extremely real. The new forklift simulator will be located at the Garrison Mobile Equipment facility in building 5400. The simulator will support forklift simulation training needs for command organizations and its tenants.

If you would like further information on virtual reality forklift simulators, you may visit their website at: <https://forklift-simulator.com/>
