

Certification of Customer Notice

Service Line Material Classification

Federal and State regulations require that water systems notify all persons served by a service line classified as Lead, Galvanized Requiring Replacement (GRR), or Lead Status Unknown within **30 days** of Service Line Inventory submission. Failure to provide this information to these customers will constitute a State and Federal violation!

To certify that you met this requirement, please complete this form and include:

- (1) A list of service line addresses that were notified and the type of letter sent to each address
- (2) A sample copy of each type of letter sent (Lead, GRR, Lead Status Unknown)

Water System ID#: GA0950035

Water System Name: USMC-Logistics

Contact Person: Jay Howell, Base Environmental

Phone: (229) 639-5804

Date of Service Line Inventory Submission: 10/14/2024

SERVICE LINE CLASSIFICATION

Notices were provided to all persons who are served by the indicated service line classification(s) below. Check all that apply:

- | | |
|---|---------------------------------|
| <input type="checkbox"/> Lead | # of Notices Distributed: _____ |
| <input type="checkbox"/> Galvanized Requiring Replacement (GRR) | # of Notices Distributed: _____ |
| <input checked="" type="checkbox"/> Lead Status Unknown | # of Notices Distributed: 18 |

DELIVERY DATE & METHOD

Notices must be delivered within 30 days of Service Line Inventory submission via a direct method listed below. Please indicate when and how notices were delivered:

Date(s) of Delivery: November 4-5, 2024

- ☐ Mailed with Water Bill ☐ Mailed with CCR ☐ Separate Mail ☒ Hand Delivery ☐ Email*

**If using Email, the water system must ensure that all intended persons are reached. Any Email that is undeliverable or returned to sender will need to be distributed via another method indicated above.*

Signature of Owner, Administrative Contact, or Official Custodian

I, Colonel Matthew J. McKinney, hereby certify that notices have been provided to all consumers served by service lines that were classified as indicated above. Included with this document are a copy of each type of letter sent and a list of addresses that were notified, which includes the type of letter distributed to each address.

Signature: _____

Date: 14 Nov 2024

Please mail or Email these documents to:

GA EPD-Drinking Water Program-Compliance Unit
Attn: Katherine Doussa or Jennifer Morson
2 MLK Jr. Dr., Floyd Towers-East 1052, Atlanta GA 30334

Email Address for submittal: epd.LCN@dnr.ga.gov

EPD-Watershed Protection Branch Main Office Phone #: (404) 463-1511

Notice of Unknown Service Line Letter

1. Our public water system is focused on protecting the health of every person living and working in our facilities and housing (family and unaccompanied) on our installations. This notice contains important information about your drinking water. Please share this information with anyone who consumes water (drinking, showering, bathing, dishwashing, cooks, oral hygiene) at this location. In addition to the people directly served at this property, this could and should include people in barracks, family housing, military treatment facilities, schools, CDCs, and workplaces.

**Public Water System Name: Marine Corps
Logistics Base Albany**

PWS ID No.: GA0950035

Service Line Locations: Bldg. 1121, Bays 1, 3 and 5; Bldg. 1220, Bay 3; Bldg. 1230, Bays 1, 3 & 5; Bldg. 1231, Bay 3; Bldg. 1260, Bay 5; Bldg. 2204; Bldg. 2251; Bldg. 2252; Bldg. 2311; Bldg. 3600; Bldg. 5484; Bldg. 5643; Bldg. 7114; and Structure 7132.

We have determined that either a portion of, or the entire water pipe (called a service line) that connects your home, building, or other structure to the water main is made from **unknown material but may be lead**. Because your service line material is unknown, there is the potential that some or all of the service line could be made of lead or galvanized pipe that was previously connected to lead. The Marine Corps Logistics Base Albany's Water distribution system has eighteen (18) water service lines that currently are made up of unknown material. None of these service lines are classified as residential service connections.

2. Galvanized service lines that have adsorbed lead can contribute to lead in drinking water.
3. People living in homes with a lead or galvanized pipe previously connected to a lead service line may have an increased risk of exposure to lead from their drinking water.
4. The Marine Corps water system is in compliance with USEPA lead and copper rule action levels, but we need to do some further investigation to determine if these lines require replacement. The action level for lead is 0.010 mg/L (10 ppb) for lead and 1.3 mg/L (1300 ppb) for copper.
5. If you have questions concerning any of the information provided in this notice, or if you have information that could help us better describe your service line, contact us via: Add Public Works Trouble Desk Line Contact information.
6. **Health effects of lead.**
Exposure to lead in drinking water can cause serious health effects in all age groups. Infants and children can have decreases in IQ and attention span. Lead exposure can lead to new learning and behavior problems or worsen existing learning and behavior problems. The children of women who are exposed to lead before or during pregnancy can have an increased risk of these negative health effects. Adults can have increased risks of heart disease, high blood pressure, and kidney, or nervous system problems.

7. **Steps you can take to reduce lead in drinking water.**

Below are recommended actions that you may take, separately or in combination if you are concerned about lead in your drinking water. The list also includes where you may find more information and is not intended to be a complete list or to imply that all actions equally reduce lead in drinking water.

- **Use your filter properly.** Using a filter can reduce lead in drinking water. If you use a filter, it should be certified to remove lead. Read any directions provided with the filter to learn how to properly install, maintain, and use your cartridge and when to replace it. Using the cartridge after it has expired can make it less effective at removing lead. Do not run hot water through the filter. For more information on facts and advice on home water filtration systems, visit EPA's website at <https://www.epa.gov/water-research/consumer-tool-identifying-point-use-and-pitcher-filters-certified-reduce-lead>.
- **Clean your aerator.** Regularly remove and clean your faucet's screen (also known as an aerator). Sediment, debris, and lead particles can collect in your aerator. If lead particles are caught in the aerator, lead can get into your water.
- **Use cold water.** Do not use hot water from the tap for drinking, cooking, or making baby formula as lead dissolves more easily into hot water. Boiling water does not remove lead from water.
- **Run your water.** The more time water has been sitting in pipes providing water to your home, the more lead it may contain. Before drinking, flush your home's pipes by running the tap, taking a shower, doing laundry, or doing a load of dishes. The amount of time to run the water will depend on whether your home has a lead service line or not, as well as the length and diameter of the service line and the amount of plumbing in your home. Flushing for at least 3 to 5 minutes before using water for drinking or cooking, especially if the water hasn't been used for several hours, is recommended. For water that has been sitting overnight, flushing for 5 minutes or longer is advisable.

8. **Get your child tested to determine lead levels in their blood.**

If you have any health-related questions or concerns about lead exposure or a blood lead test, you are encouraged to contact your health care provider, or if you are a TRICARE beneficiary, use the REGION Appointment Center to schedule an appointment with your primary care provider at 1-866-201-6361.

In the United States, State, city or county health departments can also provide information about how you can have your child's blood tested for lead. The Centers for Disease Control and Prevention and the Marine Corps recommend public health actions when the level of lead in a child's blood is 3.5 micrograms per deciliter (µg/dL) or more. For more information and links to the CDC's website, please visit <https://www.epa.gov/ground-water-and-drinking-water/basic-information-about-lead-drinking-water>.

9. **For more information on reducing lead exposure** from your drinking water and the health effects of lead, visit EPA's website at <http://www.epa.gov/lead>.
